- lines 240-242 : button hover
- lines 251-260 : classes and properties for the links to sign up
- lines 264-267 : properties for the log in with text
- lines 270-284 : css properties for the icons such as the color of the icons,which symbols used for the socials and a hover so when swiping through each icon the color changes to beige

PRODUCTS PAGE (HTML)

- lines 14-20 : a div for the container, row and col-2 and for the rest of the lines so (lines 17-20) created a class for the icon and did and h2 for the logo)
- lines 21-31 : a div class with col-6 for the menu which includes the home,products,about and contact pages as an unordered list
- lines 33-216 : each of these lines has a row, col-12 and a div class card with the image,name of product,price and about each product and to close the div I added a button to add to cart under each card

PRODUCTS PAGE (CSS)

- line 4 : height for the icon
- lines 7-13: properties for the logo such as color,font size etc..
- lines 16-19 : menu class with a height property
- lines 22-58 : classes for the unordered list which includes that the list is positioned at the top but in the center of the page, font size of 14px and displayed in a black color
- line 62 : is the hover so when swiping through the menu the text will switch to beige
- lines 66-71 : class for the card with the following properties- font family,text align,margin and box shadow
- lines 74-76 : price class with a size of 22px and grey as the color

- lines 79-88 : the class for the card button which is 'add to cart' with the color property of #4a3728 (a shade of brown)
- lines 91-93 : a hover for the button

ABOUT PAGE (HTML)

- lines 11-21 : added the first text which is about us and the status of each member ,the image of the first member, some information about the member and a hire me text which later in the css I did it as a button
- lines 26-32 : added the first text which is about us and the status of each member ,the image of the second member, some information about the member and a hire me text which later in the css I did it as a button
- lines 37-43 : added the first text which is about us and the status of each member ,the image of the third member, some information about the member and a hire me text which later in the css I did it as a button
- lines 48-54 : added the first text which is about us and the status of each member ,the image of the last member, some information about the member and a hire me text which later in the css I did it as a button

ABOUT PAGE (CSS)

- lines 7-12 : the main text of the page which is ABOUT US with a color background
- lines 14-16 : the class for the picture of the team members which include a width of 302px
- lines 18-26 : a class which I named .about includes css properties like the property to align the picture at the center and each text to be displayed in black
- lines 28-30: are a class for the texts to be with the font-family verdana
- lines 32-36: class for the ABOUT US text to be 50px
- lines 39-43 : class for the information about each member with a font-size of 20px and to be display at the top of each image
- lines 57-65 : is a class for the hire button which I mentioned in the html code with a font size of 16px,background in that same brown as mentioned before and a transition to look more cleaner
- lines 67 & 68 : a hover for the button to turn beige when scrolling with the mouse on the hire me button

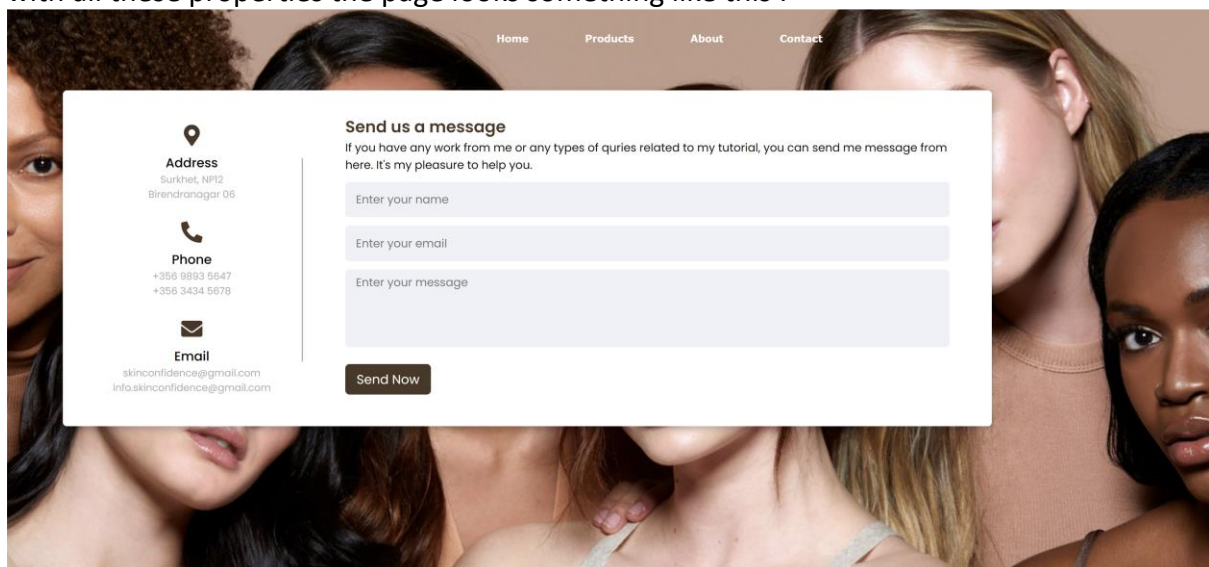

CONTACT PAGE (HTML)

- lines 14-21 : class for the menu to be displayed on this page as well
- lines 22-29 : a container with a class for the topic which in these lines is the address
- lines 31-36 : a class for the phone details
- lines 37-42 : a class for the email details
- lines 44-58 : a class to display some text on the right side of the contact box which includes send us a message and the reason why (lines 48-50) : class input-box for the enter name placeholder (lines 51-53) : another class input-box for the email (lines 54-56) : a class input box for the message area and (lines 57&58) : include a class for the send now button

CONTACT PAGE (CSS)

- for the css in this page I did the menu in a white color and added the same background image as the main page
- lines 30-66 : classes for the left side of the container which include the icons with a brown color property and small text mentioned in the html code
- lines 70-115 : classes for the right side items of the container with three boxes for the enter your name, enter your email and enter a message with a grey fill, at the bottom of the left side there's the button send now with the same brown color and a beige hover and another thing to mention at the top of the left side of the container there's send us a message and the reason to contact

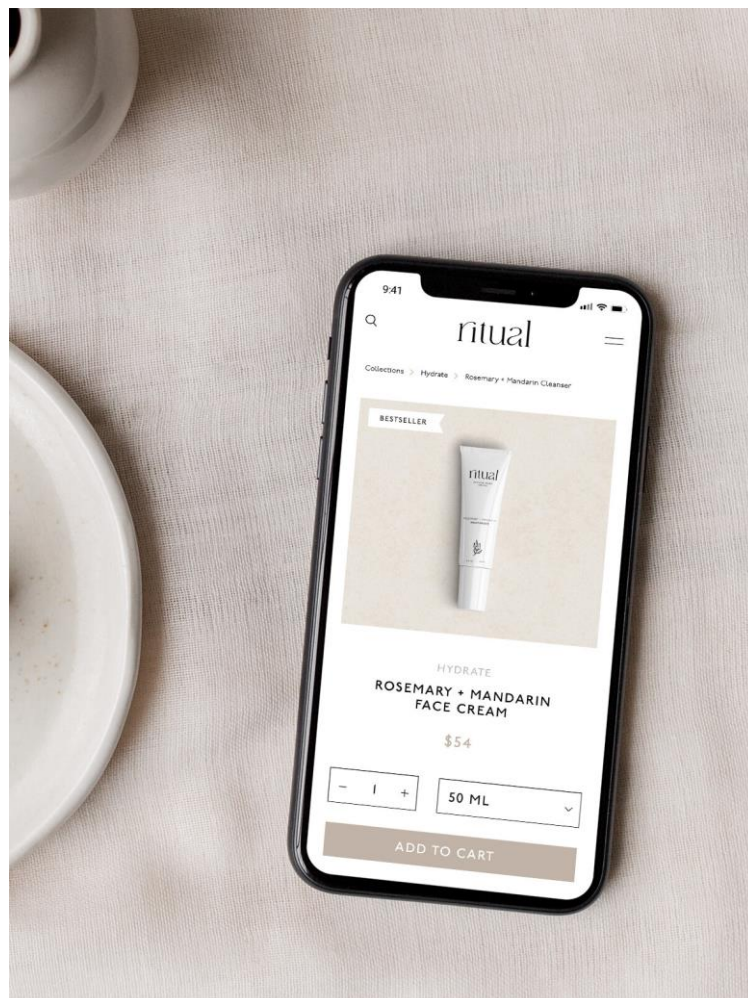

with all these properties the page looks something like this :

- some changes that i made that where in my original plan but I removed them from the final outcome is that I didn't add cart at the right-hand side of the main page and also the profile option. Moreover, I wanted to do a separate page for the cart but I didn't

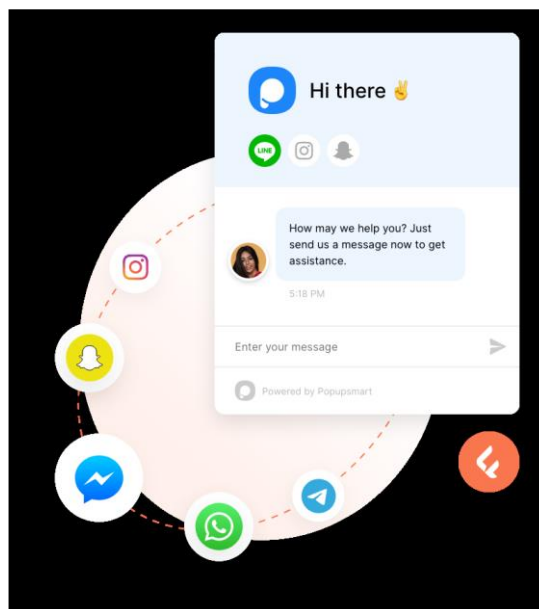

manage to do the code well so instead I decided to keep everything simple and I stuck with 4 pages.

- for improvements to my final work, I think is give my website more structure and use hierarchy and also maybe use the grid method as well to help me fill the pages more and fill the page more so it doesn't look to simple.
- I think I could've chosen a better color scheme a use colors that complement each other because in my opinion the colors I chose are bit basic and could've used maybe more cool shades with warm tones instead of neutrals because I think it could've brought a good accent to the pages.
- another improvement is that the website could've been structured in a mobile friendly layout as well because the way it is right now when people try to access the website from their mobile phone when they zoom the elements could lose their structure and does not look pleasant.

TWO INTERNET SERVICES

- Today, Usenet is similar to an online bulletin-board, discussion platform or forum, comparable to other forums on the internet. Usenet is **segmented into different topics**, called '**newsgroups**' and these are posted on a worldwide network of servers, called '**news servers**'.
- this service could've allowed me to have a services where I can chat and share files with anyone using the website, it also could've offered me a full download and access speeds and a free exchange of information with people.
- Communication is essential for my website because it ensures a **clear and unified message** for visitors. It also ensures that the visitors who come to your website have a **positive experience**.
- ways I could've used it to my advantage is by offering the target audience a more effective way to contact maybe I could've created a feature where they can chat with one of the members, the feature I could've added is a live chat box so that the audience can easily fulfil their need for answers in a few minutes.
